

Suspicious Activity Casework Narratives

Top 10 Ranked Alerts — Regulator-Facing Casework File

CloudWalk Payments Inc. (program manager) — prepared for review by the Lead Bank (FDIC-member sponsor) and examiners

Candidate: Vitor Cruz | Submission date: 2026-08-24 | Target role: AML/CTF Analyst (US) — CloudWalk Payments Inc.

CONFIDENTIAL — SAR-RELATED CASEWORK This file supports SAR decisioning and is confidential under 31 U.S.C. 5318(g)(2). Where a filing is recommended, no subject may be notified, directly or indirectly, that a SAR is being considered or filed.

Overview — Ranked Alerts

#	Customer	Primary typology	Aggregate	Recommendation
1	C12105	Device/IP mule ring	\$12,485.88	File
2	C12451	Device/IP mule ring	\$9,493.60	File
3	C12373	Device/IP mule ring (cash-in/out)	\$10,875.49	File
4	C88888	Sanctioned-jurisdiction nexus (Iran/OFAC)	\$4,374.19	Escalate
5	C12261	Structuring + cash-in/out	\$23,206.32	File
6	C12297	PEP + high-risk MCC	\$8,958.89	File
7	C12313	Structuring (high value)	\$23,919.92	File
8	C12286	Card testing	\$8,960.89	File
9	C12331	Structuring + cash-in/out	\$27,838.53	File
10	C12100	PEP + high-risk MCC	\$8,832.04	File

Composite scores and typology codes (T01–T11) are drawn from the Task 4.1 detection-and-ranking model. Each narrative below is capped at 300 words.

ALERT #1 — C12105 — Coordinated device/IP mule ring *Coordinated device/IP mule ring — layering (T03 device-sharing, T09 IP-ring, T04 geo-hopping, T06 CNP no-3DS)*

Who: Emerson Garcia (C12105); US resident; DOB 1988-11-27; occupation Chef; source of funds Savings; account opened 2025-09-22.

What: Highest-scoring subject in the portfolio (composite 171.0) and lead member of a confirmed 12-account ring; 101 transactions totalling \$12,485.88 over the review period.

When: Activity 2025-03 to 2025-11; the defining event is 2025-10-26 at 14:23:59 UTC.

Where: Coordinated event at RemitFast #361 (M3061), MCC 4829, acquiring country Canada; broader activity spans MCC 6051 (CryptoBuy24), 5944 and 6011; merchant countries US, CA, BR, AE, TR, DE, GB.

How: On 2025-10-26, twelve accounts each executed one MCC 4829 money transfer from a single device (dev_shared_4829) and IP (45.129.55.210) at six-minute intervals; this subject's leg was \$1,140.74 (T332340) — a pattern consistent with scripted multi-account control rather than independent activity.

Counterparties: Merchant M3061 and the eleven co-ring accounts: C12025, C12176, C12260, C12308, C12319, C12323, C12364, C12373, C12434, C12451, C12474.

Fund flows: Card- and ATM-sourced value routed outbound through money-transfer (RemitFast) and crypto (CryptoBuy24) rails, with cross-border acquiring.

Prior history: Enhanced KYC yet rated low risk; never independently flagged before the event; average ticket \$123.62 vs CDD-expected \$27.77 (+345%).

SAR recommendation: File

Rationale: Coordinated shared-device/IP control across twelve accounts with no apparent lawful economic purpose establishes reasonable suspicion of money-mule layering.

ALERT #2 — C12451 — Coordinated device/IP mule ring *Coordinated device/IP mule ring — layering (T03, T09, T04, T06)*

Who: Emerson Anderson (C12451); account country CA; DOB 2004-10-01; occupation Analyst; source of funds Investments; account opened 2025-09-02.

What: Second-ranked ring member (composite 168.8); 97 transactions totalling \$9,493.60.

When: Activity 2025-03 to 2025-11; coordinated event 2025-10-26 at 14:11:59 UTC.

Where: RemitFast #361 (M3061), MCC 4829, Canada; heavy MCC 4829 use (18 transfers) plus CryptoBuy24 (MCC 6051); merchant countries US, CA, BR, GB, MX, CN.

How: Same coordinated session — this subject's leg was \$469.87 (T332338) from shared device dev_shared_4829 / IP 45.129.55.210.

Counterparties: Merchant M3061 and the eleven co-ring accounts (see Alert #1).

Fund flows: Inbound card value routed outbound through remittance (RemitFast) and crypto rails; cross-border legs.

Prior history: Standard KYC, low risk; average ticket \$97.87 vs expected \$28.54 (+243%); declared monthly volume (\$8,878) far exceeds observed activity — a profile mismatch.

SAR recommendation: File

Rationale: Identical shared-infrastructure and six-minute-timing evidence links this account to the coordinated ring, supporting layering suspicion.

ALERT #3 — C12373 — Coordinated device/IP mule ring *Coordinated device/IP mule ring — cash-in/cash-out (T03, T09, T04, T06)*

Who: Drew Smith (C12373); US resident; DOB 2004-05-31; occupation Manager; source of funds Investments; account opened 2025-09-01.

What: Third-ranked ring member (composite 166.5); 108 transactions totalling \$10,875.49.

When: Activity 2025-03 to 2025-11; coordinated event 2025-10-26 at 14:35:59 UTC.

Where: RemitFast #361 (M3061), MCC 4829, Canada; 16 ATM transactions (MCC 6011) and 10 money transfers (MCC 4829); merchant countries US, CA, AE, BR, TR, CN, MX, DE.

How: Coordinated leg \$689.41 (T332342) from the shared device/IP; the full-period profile shows ATM cash-in feeding money-transfer cash-out.

Counterparties: Merchant M3061 and the eleven co-ring accounts (see Alert #1).

Fund flows: ATM/cash-in (MCC 6011) to money-transfer cash-out (MCC 4829); cross-border acquiring.

Prior history: Standard KYC, low risk; average ticket \$100.70 vs expected \$12.72 (+692%) — the largest CDD deviation in the ring.

SAR recommendation: File

Rationale: Ring membership combined with a distinct ATM-to-remittance cash-in/cash-out cycle reinforces layering suspicion.

ALERT #4 — C88888 — Sanctioned-jurisdiction nexus / OFAC screening alert *Sanctioned-jurisdiction nexus / OFAC screening alert (T11 FATF-OFAC, T06 CNP no-3DS, T07 chargeback)*

Who: Mohammad Reza Al-Sana (C88888); US resident (Newark, NJ); DOB 1986-04-22; occupation Consultant; source of funds “Investments” (vague); primary identity document a passport issued by Iran (doc_issue_country IR).

What: Sanctions match score 0.84 — the highest in the portfolio and unresolved; 45 transactions totalling \$4,374.19.

When: Activity 2025-03 to 2025-10-31.

Where: Ordinary retail/transport merchants (City Cabs, DirectTel, ATM Express, Empire Jewelry); merchant countries US, MX, CA, BR, AE.

How: No coordinated or structured transactional pattern is observed. The risk arises from the sanctioned-jurisdiction identity nexus (Iran, 31 CFR Part 560) and an unadjudicated 0.84 OFAC screening alert, compounded by a subcalibrated rating and standard KYC.

Counterparties: No probative time-clustered device/IP ring linkage (lifetime co-use only).

Fund flows: Modest, dispersed card spend; no clear layering signature.

Prior history: Rated medium / standard KYC — both subcalibrated; policy mandates HIGH and enhanced KYC on a sanctions score > 0.7 and an OFAC-comprehensive document nexus.

SAR recommendation: Escalate for further review (do not file on profile alone)

Rationale: A screening score is a signal to investigate, not evidence of a reportable transaction; adjudicate the 0.84 alert and complete EDD. If confirmed, file with keyword IRAN-2025-A002 (Field 2) and separately submit an OFAC blocking/reject report.

ALERT #5 — C12261 — Structuring / repeated sub-\$1,000 layering + cash-in/cash-out
Structuring / repeated sub-\$1,000 layering + cash-in/cash-out (T01, T08, T04, T06)

Who: Jordan Lopez (C12261); US resident; DOB 1992-10-26; occupation Chef; source of funds Savings; account opened 2025-09-01.

What: Composite 94.3; 72 transactions totalling \$23,206.32; average ticket \$322.31 vs expected \$29.82 (+981%).

When: Activity 2025-03 to 2025-10-21; structuring burst 2025-08-30 to 2025-09-04.

Where: 16 transactions of \$982.64–\$994.45 in MCC 4829 (RemitFast) and MCC 6051 (CryptoBuy24), plus ATM (MCC 6011); merchant countries US, CA, BR, GB, TR.

How: Repeated sub-\$1,000 amounts concentrated in money-transfer and crypto merchants within a five-day window, alongside ATM cash-in feeding transfer cash-out — a layering/evasion signature, not proximity to the \$10,000 CTR threshold.

Counterparties: RemitFast (#361, #363), CryptoBuy24, ATM Express. Shares the name “Jordan Lopez” with Alert #10 (C12100) — verify possible multiple-account control.

Fund flows: ATM/card cash-in to repeated sub-\$1,000 remittance and crypto cash-out; cross-border legs.

Prior history: Low risk despite ~\$23k throughput — materially subcalibrated; declared monthly volume (\$11,736) inconsistent with the observed pattern.

SAR recommendation: File

Rationale: Deliberate repetition of sub-\$1,000 amounts in high-risk MCCs plus cash-in/cash-out cycling supports reasonable suspicion of structured layering.

ALERT #6 — C12297 — PEP transacting in high-risk MCCs *PEP transacting in high-risk MCCs (T05 PEP-high-risk-MCC, T04, T06, T07)*

Who: Kendall Williams (C12297); US resident; DOB 1999-07-15; occupation Teacher; source of funds Gift; politically exposed person (pep_flag=True); account opened 2025-06-03.

What: Composite 77.6; 106 transactions totalling \$8,958.89; average ticket \$84.52 vs expected \$36.86 (+129%).

When: Activity 2025-03 to 2025-11-07.

Where: LuckyAce Casino (MCC 7995), ATM Express (6011), DirectTel (5967), RemitFast (4829); merchant countries US, CA, BR, AE, DE, MX, GB, CN.

How: A politically exposed person conducting recurring gambling, money-transfer and ATM activity with cross-border geo-hopping and a chargeback — high-risk-MCC exposure inconsistent with a teacher profile funded by “Gift.”

Counterparties: Casino, money-transfer and telecom merchants; no time-clustered device/IP ring.

Fund flows: Card/ATM value into gambling and remittance rails; cross-border acquiring.

Prior history: Correctly rated high (PEP), but KYC only standard — should be enhanced; source of funds “Gift” unsubstantiated for the volume.

SAR recommendation: File

Rationale: PEP status combined with concentrated high-risk-MCC and cross-border activity and an unsupported source of funds meets the reason-to-suspect standard.

ALERT #7 — C12313 — Structuring / sub-\$1,000 layering *Structuring / sub-\$1,000 layering — high value (T01, T04, T06, T07)*

Who: Hayden Martinez (C12313); US resident; DOB 1999-10-16; occupation Manager; source of funds Salary; account opened 2025-04-01.

What: Composite 75.9; 114 transactions totalling \$23,919.92 (highest-value non-ring subject); average ticket \$209.82 vs expected \$33.13 (+533%).

When: Activity 2025-03 to 2025-11-07; structuring burst 2025-08-27 to 2025-09-01.

Where: 16 transactions of \$980.69–\$994.77 in MCC 4829 (RemitFast) and 6051 (CryptoBuy24); heavy RemitFast/CryptoBuy24 use; merchant countries US, CA, TR, BR, GB, CN, AE, MX.

How: A five-day burst of repeated sub-\$1,000 amounts in money-transfer and crypto merchants, embedded in otherwise high-value throughput — a layering pattern.

Counterparties: RemitFast (#325), CryptoBuy24 (#332, #304). The 16-count / five-day / MCC-4829-6051 signature is near-identical to Alerts #5 and #9 — possible common playbook.

Fund flows: Card value routed through remittance and crypto-exchange rails; cross-border legs.

Prior history: Enhanced KYC yet rated low despite ~\$24k throughput — subcalibrated.

SAR recommendation: File

Rationale: Repetitive sub-\$1,000 activity in high-risk MCCs with substantial aggregate value supports structured-layering suspicion.

ALERT #8 — C12286 — Card testing *Card testing — rapid low-value CNP probing (T02, T04, T06, T07)*

Who: Sam Thompson (C12286); US resident; DOB 2003-10-26; occupation Analyst; source of funds Salary; account opened 2025-05-14.

What: Composite 67.4; 138 transactions (the most in the top 10) totalling \$8,960.89; 52 keyed card-not-present e-commerce transactions.

When: Activity 2025-03-01 to 2025-10-31.

Where: 30 sub-\$5 ECOM authorizations across MediaStream, StyleStreet and GadgetWorks; merchant countries US, CA, BR, GB, DE, AE, CN.

How: A cluster of very low-value (<\$5) card-not-present authorizations with a 73% decline rate — the signature of card testing (validating card credentials) — alongside broader keyed ECOM activity and a chargeback.

Counterparties: E-commerce (digital-goods/retail) merchants; no time-clustered device/IP ring.

Fund flows: Low-value CNP probing followed by higher-value spend on validated cards.

Prior history: Standard KYC, low risk; transaction count well out of pattern for the declared profile.

SAR recommendation: File

Rationale: The low-value, high-decline CNP pattern is a recognised card-testing/enumeration typology indicating use of compromised card data.

ALERT #9 — C12331 — Structuring + cash-in/cash-out *Structuring + cash-in/cash-out — highest throughput (T01, T04, T06)*

Who: Jordan White (C12331); US resident; DOB 2000-04-20; occupation Consultant; source of funds Savings; account opened 2025-04-14.

What: Composite 63.2; 128 transactions totalling \$27,838.53 — the highest aggregate throughput in the top 10; average ticket \$217.49 vs expected \$20.87 (+942%).

When: Activity 2025-03 to 2025-11-07; structuring burst 2025-05-17 to 2025-05-22.

Where: 16 transactions of \$980.83–\$993.88 in MCC 4829 (RemitFast) and 6051; 28 money transfers (MCC 4829) and 13 ATM (MCC 6011); merchant countries US, CA, BR, TR, DE, CN, AE, GB.

How: Heavy money-transfer concentration with ATM cash-in feeding remittance cash-out, plus a five-day burst of repeated sub-\$1,000 transfers — layering with an evasion signature.

Counterparties: RemitFast (#390, #331, #359), ATM Express. Signature matches Alerts #5 and #7.

Fund flows: ATM/card cash-in to repeated sub-\$1,000 money-transfer cash-out; cross-border acquiring.

Prior history: Standard KYC, low risk despite ~\$28k throughput and a \$20.87 declared ticket — severely subcalibrated.

SAR recommendation: File

Rationale: Highest-value structured layering in the cohort; repetition, MCC concentration and cash-in/cash-out cycling establish reasonable suspicion.

ALERT #10 — C12100 — PEP transacting in high-risk MCCs *PEP transacting in high-risk MCCs (T05, T04, T06)*

Who: Jordan Lopez (C12100); US resident; DOB 1998-08-15; occupation Chef; source of funds Salary; politically exposed person (pep_flag=True); account opened 2025-06-16.

What: Composite 62.7; 90 transactions totalling \$8,832.04; average ticket \$98.13 vs expected \$29.43 (+233%).

When: Activity 2025-03-01 to 2025-11-05.

Where: RemitFast (MCC 4829), CryptoBuy24 (6051), Universal Retail, StyleStreet; merchant countries US, CA, BR, TR, GB, AE, MX, CN.

How: A politically exposed person conducting recurring money-transfer and crypto activity with pronounced cross-border geo-hopping and a chargeback.

Counterparties: RemitFast (#361 — the ring merchant) and CryptoBuy24; no time-clustered device/IP ring. Shares the name “Jordan Lopez” with Alert #5 (C12261).

Fund flows: Card value into remittance and crypto rails; cross-border legs.

Prior history: Correctly rated high (PEP) but KYC only standard — should be enhanced.

SAR recommendation: File

Rationale: PEP status plus concentrated high-risk-MCC, crypto and cross-border activity supports reason to suspect; possible linkage to C12261 warrants consolidated review.
